SmartPackageRoom®

A Leader in Package Management Solutions for Students

Student housing communities consistently see the highest number of package deliveries. Add the "return to campus" effect in August and September, and traditional package storage spaces are busting at the seams. Staff is spending countless hours accepting, logging, notifying, storing, and assisting with retrieval of packages. Traditional rooms and even lockers are no match to this frenzy of deliveries.

Smart Package Room® by Position Imaging solves this problem entirely with the ability to securely store any type and size of package. The speed and ease of courier delivery leads to much better courier adoption. Laser guided resident pickup makes it easy and fast for students to find and pick up their packages. And it's available 24 hours a day/7 days a week!

The Smart Package Room proves to be the most efficient way to manage packages time and time again!

## Let the Smart Package Room Do All the Work!

Benefits of the Smart Package Room

- Higher Courier Adoption
- Agnostic Package Size & Type
- Scalable, Maximize Capacity
- Coolest Amenity Using Laser & Audio Guidance

How Smart Package Room Works:

- Courier scans the package label and places the package on shelf in the Smart Package Room. An intuitive computer system monitors the package 24/7 until retrieved by the resident.

- Resident is instantly notified and receives a picture, QR code and PIN to enter the secured room 24/7.

- Resident scans the QR code or PIN, enters the room and is directed to their package via audio and laser guidance.
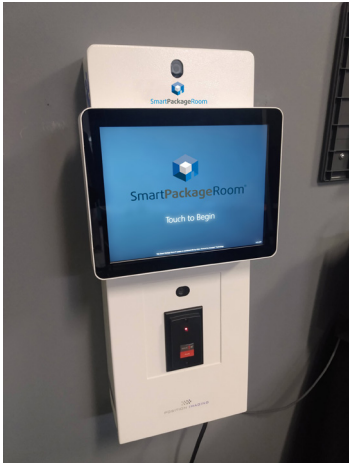

Markets: New development and existing assets for student housing, high-rise communities and garden style apartments.

Before

After

The Smart Package Room can triple capacity

Specifications

Package Capacity = 250
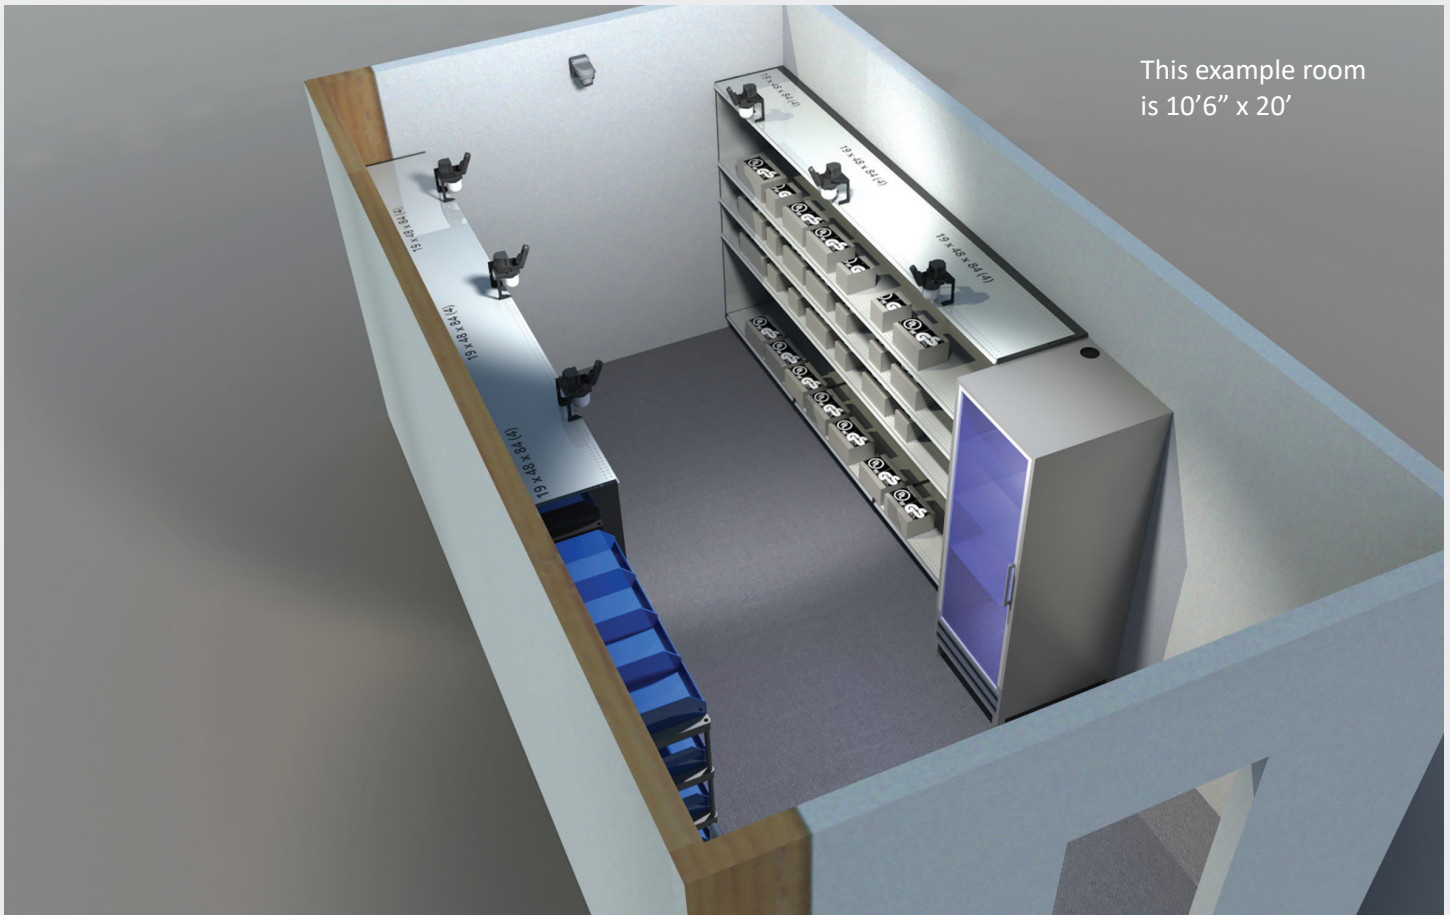

- 6 Zones
- 1 Envelope Zone
